

Environmental Policy for Allgon AB and Subsidiaries in Multisite Certificate

Allgon's work developing, manufacturing and marketing safe and reliable solutions for wireless equipment controls and communication is based on a perspective of sustainability. This means that the company takes responsibility of the product's life cycle at an early stage, by technically and economically constructing products which have as little impact on the environment as possible.

We achieve success in our sustainability work by:

- Continuously enhancing the environmental awareness of all our employees as well as equipping them with the tools required to maintain their commitment and participation.
- Cooperating with suppliers and customers in order to reduce environmental impact and working towards a sustainable supply chain.
- Complying with legislations as well as other sustainability requirements.
- Constantly improving our environmental and sustainability performance and preventing pollution.
- The environmental management system is based on ISO 14001 as an integrated part of Allgon's operating system and is the foundation for our work.
- Demonstrate responsible care for the environment wherever we operate and build trust by adhering to our Code of Conduct(s).
