EU Regulatory Compliance: Information for Our Clients

Tele Radio, part of Allgon Group — RED, Machinery Regulation & Cyber Resilience Act

Introduction

New EU regulations are reshaping safety and cybersecurity requirements for machinery and connected products. Three regulations now apply to our industry:

- **The Radio Equipment Directive (RED)** — covering wireless equipment
- **The Machinery Regulation** — covering machinery as a whole
- **The Cyber Resilience Act (CRA)** — covering any product with a software element

Each regulation builds on the last, progressively extending cybersecurity requirements across a broader range of products. Tele Radio, part of Allgon Group, is directly affected by all three, and this sheet explains where we stand today and what it means for you as our customer.

The Regulations, Briefly

Radio Equipment Directive (RED) Cybersecurity requirements for wireless equipment, in effect since 1 August 2025.

Machinery Regulation Replaces the current Machinery Directive. Covers the complete machine, including — for the first time — cybersecurity. Applies from 20 January 2027.

Cyber Resilience Act (CRA) The EU's first horizontal cybersecurity law, covering any product with a software element. Main obligations apply from 11 December 2027.

Together, these regulations form a progressively broader framework — from wireless equipment, to machinery, to any connected product — for how products must be secured across the EU.

Where Tele Radio Stands Today

Regulation	Status
RED	Already compliant. Declarations of Conformity are in place for applicable products.
Machinery Regulation	An active, Group-coordinated certification project is underway across our Panther, Tiger, Puma, and new-generation product families.
Cyber Resilience Act	Readiness work is in progress across Allgon Group.

Tele Radio, part of Allgon Group, benefits directly from this Group-wide program — the certification and readiness work above covers products sold under our brand as well.

What This Means for You

- **No products are being phased out.** Tele Radio is investing to keep its product families compliant and on the market for years to come.
- **Existing installations are not affected retroactively.** Equipment already in service is not impacted by any of these regulations.
- **Updated documentation is on its way.** New declarations of conformity will be issued ahead of each applicable deadline, well before you need them.

In short: these regulations mean changes to our certification work behind the scenes, not changes to the products and support you already rely on.
